ELSEVIER

Comput. Methods Appl. Mech. Engrg. 143 (1997) 419–423

Computer methods in applied mechanics and engineering

Subject Index of Volume 143

Boundary element methods

High-order boundary conditions and finite elements for infinite domains, D. Givoli, I. Patlashenko and J.B. Keller 13– 39

Dynamics

An exact model reduction procedure for mechanical systems, S.L. Chen and M. Géradin 69– 78

Elasticity

Nonlinear analysis of laminates through a mindlin-type shear deformable shallow shell element, A. Barut, E. Madenci and A. Tessler 155–173

Shape-memory alloys: modelling and numerical simulations of the finite-strain superelastic behavior, F. Auricchio and R.L. Taylor 175–194

C^1-Continuous stress recovery in finite element analysis, H.R. Riggs, A. Tessler and H. Chu 299–316

Electromagnetic fields

A domain decomposition approach for heterogeneous time-harmonic Maxwell equations, A. Alonso and A. Valli 97–112

Finite difference methods

A fractional four-step finite element formulation of the unsteady incompressible Navier–Stokes equations using SUPG and linear equal-order element methods, H.G. Choi, H. Choi and J.Y. Yoo 333–348

A finite element formulation for the Stokes problem allowing equal velocity–pressure interpolation, R. Codina and J. Blasco 373–391

Finite element and matrix methods

A new finite element with 'drilling' D.O.F., C. Chinosi, M.I. Comodi and G. Sacchi 1– 11

High-order boundary conditions and finite elements for infinite domains, D. Givoli, I. Patlashenko and J.B. Keller 13– 39

The quadrilateral 'Mini' finite element for the Stokes problem, W. Bai 41– 47

A finite element formulation for incompressible flow problems using a generalized streamline operator, M.A. Cruchaga and E. Oñate 49– 67

Numerical analysis of the modified EVSS method, M. Fortin, R. Guénette and R. Pierre 79– 95

A domain decomposition approach for heterogeneous time-harmonic Maxwell equations, A. Alonso and A. Valli 97–112

Moving least-square reproducing kernel methods (I) Methodology and convergence, W.-K. Liu, S. Li and T. Belytschko 113–154

Nonlinear analysis of laminates through a mindlin-type shear deformable shallow shell element, A. Barut, E. Madenci and A. Tessler 155–173

Shape-memory alloys: modelling and numerical simulations of the finite-strain superelastic behavior, F. Auricchio and R.L. Taylor 175–194
On the constitutive modeling and finite element computation of rate-dependent frictional sliding in large deformations, T.A. Laursen and V.G. Oancea 197–227
On discrete projection methods for the incompressible Navier–Stokes equations: an algorithmical approach, S. Turek 271–288
Linearizing convection terms in the Navier–Stokes equations, B.M. DeBlois 289–297
C^1-Continuous stress recovery in finite element analysis, H.R. Riggs, A. Tessler and H. Chu 299–316
Equal-order interpolations: a unified approach to stabilize the incompressible and advective effects, M. Storti, N. Nigro and S. Idelsohn 317–331
A fractional four-step finite element formulation of the unsteady incompressible Navier–Stokes equations using SUPG and linear equal-order element methods, H.G. Choi, H. Choi and J.Y. Yoo 333–348
A monotone finite element method with test space of Legendre polynomials, T.W.H. Sheu, S.F. Tsai and M.M.T. Wang 349–372
A finite element formulation for the Stokes problem allowing equal velocity–pressure interpolation, R. Codina and J. Blasco 373–391
Energy preserving/decaying schemes for non-linear beam dynamics using the helicoidal approximation, C.L. Bottasso and M. Borri 393–415

Fluid mechanics
A finite element formulation for incompressible flow problems using a generalized streamline operator, M.A. Cruchaga and E. Oñate 49– 67
Numerical analysis of the modified EVSS method, M. Fortin, R. Guénette and R. Pierre 79– 95
On discrete projection methods for the incompressible Navier–Stokes equations: an algorithmical approach, S. Turek 271–288
Linearizing convection terms in the Navier–Stokes equations, B.M. DeBlois 289–297
Equal-order interpolations: a unified approach to stabilize the incompressible and advective effects, M. Storti, N. Nigro and S. Idelsohn 317–331
A fractional four-step finite element formulation of the unsteady incompressible Navier–Stokes equations using SUPG and linear equal-order element methods, H.G. Choi, H. Choi and J.Y. Yoo 333–348
A monotone finite element method with test space of Legendre polynomials, T.W.H. Sheu, S.F. Tsai and M.M.T. Wang 349–372
A finite element formulation for the Stokes problem allowing equal velocity–pressure interpolation, R. Codina and J. Blasco 373–391

General Rayleigh–Ritz and Galerkin techniques
A new finite element with 'drilling' D.O.F., C. Chinosi, M.I. Comodi and G. Sacchi 1– 11
A finite element formulation for incompressible flow problems using a generalized streamline operator, M.A. Cruchaga and E. Oñate 49– 67
Moving least-square reproducing kernel methods (I) Methodology and convergence, W.-K. Liu, S. Li and T. Belytschko 113–154
Equal-order interpolations: a unified approach to stabilize the incompressible and advective effects, M. Storti, N. Nigro and S. Idelsohn 317–331

Incompressible and near incompressible media
The quadrilateral 'Mini' finite element for the Stokes problem, W. Bai 41– 47
A finite element formulation for incompressible flow problems using a generalized streamline operator, M.A. Cruchaga and E. Oñate 49– 67

Numerical analysis of the modified EVSS method, M. Fortin, R. Guénette and R. Pierre 79– 95
On discrete projection methods for the incompressible Navier–Stokes equations: an algorithmical approach, S. Turek 271–288
Linearizing convection terms in the Navier–Stokes equations, B.M. DeBlois 289–297
Equal-order interpolations: a unified approach to stabilize the incompressible and advective effects, M. Storti, N. Nigro and S. Idelsohn 317–331
A fractional four-step finite element formulation of the unsteady incompressible Navier–Stokes equations using SUPG and linear equal-order element methods, H.G. Choi, H. Choi and J.Y. Yoo 333–348
A finite element formulation for the Stokes problem allowing equal velocity–pressure interpolation, R. Codina and J. Blasco 373–391

Nonlinear dynamics of systems
An exact model reduction procedure for mechanical systems, S.L. Chen and M. Géradin 69– 78

Nonlinear mechanics
An exact model reduction procedure for mechanical systems, S.L. Chen and M. Géradin 69– 78
Nonlinear analysis of laminates through a mindlin-type shear deformable shallow shell element, A. Barut, E. Madenci and A. Tessler 155–173
Shape-memory alloys: modelling and numerical simulations of the finite-strain superelastic behavior, F. Auricchio and R.L. Taylor 175–194
On the constitutive modeling and finite element computation of rate-dependent frictional sliding in large deformations, T.A. Laursen and V.G. Oancea 197–227
Evolution of plastic anisotropy for high-strain-rate computations, S.K. Schiferl and P.J. Maudlin 249–270
On discrete projection methods for the incompressible Navier–Stokes equations: an algorithmical approach, S. Turek 271–288
Equal-order interpolations: a unified approach to stabilize the incompressible and advective effects, M. Storti, N. Nigro and S. Idelsohn 317–331
Energy preserving/decaying schemes for non-linear beam dynamics using the helicoidal approximation, C.L. Bottasso and M. Borri 393–415

Numerical solution procedures
High-order boundary conditions and finite elements for infinite domains, D. Givoli, I. Patlashenko and J.B. Keller 13– 39
A domain decomposition approach for heterogeneous time-harmonic Maxwell equations, A. Alonso and A. Valli 97–112
Moving least-square reproducing kernel methods (I) Methodology and convergence, W.-K. Liu, S. Li and T. Belytschko 113–154
Nonlinear analysis of laminates through a mindlin-type shear deformable shallow shell element, A. Barut, E. Madenci and A. Tessler 155–173
On discrete projection methods for the incompressible Navier–Stokes equations: an algorithmical approach, S. Turek 271–288
Linearizing convection terms in the Navier–Stokes equations, B.M. DeBlois 289–297
C^1-Continuous stress recovery in finite element analysis, H.R. Riggs, A. Tessler and H. Chu 299–316
A monotone finite element method with test space of Legendre polynomials, T.W.H. Sheu, S.F. Tsai and M.M.T. Wang 349–372
A finite element formulation for the Stokes problem allowing equal velocity–pressure interpolation, R. Codina and J. Blasco 373–391

Optimization and design of structures
A method for contact problems using virtual elements, W.R.C. Underhill, M.A. Dokainish and G.Æ. Oravas 229–248

Plasticity
Shape-memory alloys: modelling and numerical simulations of the finite-strain superelastic behavior, F. Auricchio and R.L. Taylor 175–194
Evolution of plastic anisotropy for high-strain-rate computations, S.K. Schiferl and P.J. Maudlin 249–270

Problems in physics
High-order boundary conditions and finite elements for infinite domains, D. Givoli, I. Patlashenko and J.B. Keller 13– 39
A domain decomposition approach for heterogeneous time-harmonic Maxwell equations, A. Alonso and A. Valli 97–112

Shells and plates
Nonlinear analysis of laminates through a mindlin-type shear deformable shallow shell element, A. Barut, E. Madenci and A. Tessler 155–173

Solutions of ordinary and partial differential equations
High-order boundary conditions and finite elements for infinite domains, D. Givoli, I. Patlashenko and J.B. Keller 13– 39
A domain decomposition approach for heterogeneous time-harmonic Maxwell equations, A. Alonso and A. Valli 97–112
Moving least-square reproducing kernel methods (I) Methodology and convergence, W.-K. Liu, S. Li and T. Belytschko 113–154
Energy preserving/decaying schemes for non-linear beam dynamics using the helicoidal approximation, C.L. Bottasso and M. Borri 393–415

Structural mechanics
A new finite element with 'drilling' D.O.F., C. Chinosi, M.I. Comodi and G. Sacchi 1– 11
The quadrilateral 'Mini' finite element for the Stokes problem, W. Bai 41– 47
An exact model reduction procedure for mechanical systems, S.L. Chen and M. Géradin 69– 78
On the constitutive modeling and finite element computation of rate-dependent frictional sliding in large deformations, T.A. Laursen and V.G. Oancea 197–227
Evolution of plastic anisotropy for high-strain-rate computations, S.K. Schiferl and P.J. Maudlin 249–270
Energy preserving/decaying schemes for non-linear beam dynamics using the helicoidal approximation, C.L. Bottasso and M. Borri 393–415

Transport phenomena
A finite element formulation for incompressible flow problems using a generalized streamline operator, M.A. Cruchaga and E. Oñate 49– 67
On discrete projection methods for the incompressible Navier–Stokes equations: an algorithmical approach, S. Turek 271–288
Linearizing convection terms in the Navier–Stokes equations, B.M. DeBlois 289–297
A fractional four-step finite element formulation of the unsteady incompressible Navier–Stokes equations using SUPG and linear equal-order element methods, H.G. Choi, H. Choi and J.Y. Yoo 333–348
A monotone finite element method with test space of Legendre polynomials, T.W.H. Sheu, S.F. Tsai and M.M.T. Wang 349–372

Viscoelastic and viscoplastic media
Numerical analysis of the modified EVSS method, M. Fortin, R. Guénette and R. Pierre 79– 95
On the constitutive modeling and finite element computation of rate-dependent frictional sliding in large deformations, T.A. Laursen and V.G. Oancea 197–227

Viscous flow
The quadrilateral 'Mini' finite element for the Stokes problem, W. Bai 41– 47
A finite element formulation for incompressible flow problems using a generalized streamline operator, M.A. Cruchaga and E. Oñate 49– 67
Numerical analysis of the modified EVSS method, M. Fortin, R. Guénette and R. Pierre 79– 95
On discrete projection methods for the incompressible Navier–Stokes equations: an algorithmical approach, S. Turek 271–288
Linearizing convection terms in the Navier–Stokes equations, B.M. DeBlois 289–297
Equal-order interpolations: a unified approach to stabilize the incompressible and advective effects, M. Storti, N. Nigro and S. Idelsohn 317–331
A fractional four-step finite element formulation of the unsteady incompressible Navier–Stokes equations using SUPG and linear equal-order element methods, H.G. Choi, H. Choi and J.Y. Yoo 333–348
A finite element formulation for the Stokes problem allowing equal velocity–pressure interpolation, R. Codina and J. Blasco 373–391
